Brushed Satin option

Brushed Satin finish available on all polished towel rails except the Shannon. Please add 30% to prices for this option. Please note the Malin is available as Brushed Satin at no extra cost. Please call for availability.

Satin Finish

Stainless Steel Finish

The Coastal Range

J.I.S. introduces the Coastal Range, the original 100% stainless steel heated towel radiator. For over 10 years we have been manufacturing these beautiful polished towel radiators to exacting standards, we are so confident in our product that we now give a 25 year guarantee* on all our radiators. We have also introduced contemporary styled feature radiators to our range so there is a stainless steel heating solution for any room in your project.

Why stainless steel and not chrome?

Stainless steel by its nature will not corrode or flake, it is also easy to clean and totally hygienic with no known health risks, thus it has been used in the food industry for many years. Stainless steel is produced from over 90% recycled metal, manufactured environmentally and is 100% recyclable itself.

Coastal Range radiators will last a lifetime, manufactured from 304 (catering grade) stainless steel with 316 (marine grade) stainless steel welds. Small marks or scratches can be polished out so they will always look great, these stunning durable radiators are the best heating choice for your home.

All our models are available in central heating, electric only and dual fuel formats. All our models can be used on any plumbing system including open systems*. All our models are quality assured and guaranteed*.

Central Heating:

All our models can replace the plumbed radiator in the bathroom and provide a stunning modern look with plenty of space to dry and warm towels. Each model is manufactured with standard 1/2" BSP tapings and are pressure tested to 12 Bar. All our models are suitable for any plumbing system including open systems*. BTU/Watt figures are based on $\Delta T=60K$. We recommend that all plumbing work is carried out by a qualified plumber.

Dual Fuel Kits:

These allow you to heat your centrally heated towel radiator electrically when the heating is turned off. Dual fuel kits comprise of an electric element and a chrome plated T piece which allows an element and central heating valve to be connected to the same side of the towel radiator. All towel radiators have been designed to allow an element to be inserted on the right hand side of the radiator, although a left hand option is available on request.

Electric Elements:

All elements used in our electric radiators and dual fuel kits are heat controlled using the latest thermal technology. Elements are fitted as standard in the right hand side of the radiator and in the case of electric only, capped on the left with a chrome plated cap. Left hand option available on request.

All elements need to be wired to a 5 amp fuse. J.I.S. Elements are rated at IP55.

It is now law that all electrical work is carried out by a qualified electrician in accordance to IEE wiring regulations.

European and international delivery is available, please call our office for a quote.

The Coastal Range by J I S Europe Ltd, Scaynes Hill, West Sussex, United Kingdom.

Further information and images are available on our website: www.thecoastalrange.co.uk

*25 Year guarantee against manufacturing defects, proof of purchase is required for an exchange unit. Guarantee extends to replacing or repair of the radiator only, it does not include delivery and installation costs. The guarantee does not extend to units used on hot water systems where a salt based water softener is present. Electric elements and accessories are guaranteed for one year.
